INSTRUCTIONS ON MOUNTING AND USE

Caution

This instruction handbook is conserved together with the 5IE64251-5IE84251 for future consultation. If the equipment is sold or transferred to another person, make certain the instruction handbook is supplied together with it, so that the new user can become aware of the operation of the cooker hood and related warnings. These warnings have been compiled for your safety and the safety of others. Please take the time to read them carefully before installing and using the equipment. Be sure to also consult the drawings in the front pages, including the alphabetic and numeric references in the text descriptions. Closely follow the instructions in this manual. The manufacturer declines all responsibility for any inconveniences, damage or fires caused due to non-compliance with the instructions in this manual. The installation and electrical connection must be provided by a qualified service technician. The supplier is not liable for any warranty for damages caused by improper installation or improper use of the appliance. Do not modify or seek to modify the specifications of this appliance.

The cooking top must always be used within the limits of normal domestic use, not for professional use, but simply to prepare and keep dishes warm. Any other use is not allowed. The unit should not be left unsupervised during its operation.

This appliance can be used by children from the age of 8 onwards, and by persons with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, provided they are properly monitored, or if they have been instructed in the safe use of the appliance and are aware of related dangers.

Children must not be allowed to play with the appliance. Cleaning and maintenance must not be carried out by children without proper supervision.

Make use of the locking device to prevent children from accidentally turning on the device, or modifying its functions. The unit should not be left unsupervised during its operation.

Do not control the cooking top using a remote timer.

The unit should not be left unsupervised during its operation. Make certain children at home are prevented from toppling hot pots and pans to the floor. Turn the handles and knobs of pots and pans to the side on the cooking top, so that they are above the cooking top, and to prevent the risk of burns.

For safety reasons, the cooking top must be used only after having been installed in its recessed housing.

Prior to proceeding with the installation, check to make sure there are no visible signs of damage

WARNINGS

to the cooking top. Never start up a damaged unit, as it may pose a safety risk.

Do not seal the area between the glass and the worktop with silicone because should the cooktop need to be replaced, the glass could break during removal.

The unit's installation and electrical connection to the power grid must be carried out by qualified service technicians only. The device's electrical safety can be guaranteed solely if a regular ground connection is provided for the cooking top. If in doubt, have the electrical system checked by a qualified electrician. If the power cord is damaged, it must be replaced by a qualified service centre or technician only.

Do not connect the cooking top to the mains using extension cords or multiple sockets, since they will not guarantee the required safety (e.g. risk of overheating).

Prior to connecting the cooktop, compare the connection specifications (voltage and frequency) indicated on the unit's identification nameplate with those of the mains electricity supply.

These specifications must absolutely correspond, otherwise the unit may be subject to damage. Contact an electrician if in doubt.

Disconnect the unit from the mains when carrying out installation work, maintenance or repairs.

Comply with all air discharge regulations.

CAUTION: If the surface is cracked, switch off the appliance to avoid the possibility of electric shock.

Never open unit's outer casing. Any contact with live parts or the modification of electrical or mechanical parts can cause operating abnormalities.

The induction hob should not be used as a work surface. The rough underside of food containers can scratch the surface of the cooktop.

Always keep the cooking areas and underside of food containers perfectly dry.

Fire hazard

Oil and grease that are too hot will catch fire quickly. Do not leave overheated oil or grease unsupervised. If oil or grease should catch fire, do not attempt to put out the flames with water. Extinguish the flames with a lid or plate, or with a fireproof blanket. Turn off the cooking zone. Never place flammable items on the hob.

WARNING: Fire hazard: do not leave objects on the cooking surface.

WARNINGS

Burn hazard

CAUTION: This appliance and its accessible parts become very hot during use. Pay attention to avoid touching the heating elements. Keep children under 8 years of age away from the appliance, unless they are continually monitored.

Do not place objects such as knives, forks, spoons or lids on the induction top, as they may overheat.

Do not heat closed containers, such as tin receptacles, on the cooking top. The excess pressure generated could blow up the container.

Suitable food containers

Only ferromagnetic containers are suitable for induction cooking; the following receptacles, in particular, are suitable: enamelled steel, cast iron, special dishes for induction cooking in stainless steel.

Use only pots and pans with a smooth bottom. Do not introduce any objects between the bottom of the pot and the glass ceramic surface, such as adapters.

| Cooking zone | Minimum diameter | Maximum recommended diameter |
|--------------|-------------------------------|------------------------------|
| 1 | 90mm-100mm (Booster power) | 160mm* |
| 2 | 120mm | 200mm* |
| 3 | 120mm | 200mm* |
| 4 | 90mm-100mm (Booster power) | 160mm* |

* the maximum recommended diameter corresponds to the diameter of the cooking zone; pots of a greater diameter can be used but the heat will spread much less uniformly.

To find whether receptacles are suitable, check whether they are attracted by a magnet.

Another type of special receptacle exists for induction cooking, with a bottom that is not entirely ferromagnetic.

Non-suitable food containers

Never use recipients made of: normal finegrained steel, glass, pottery, copper and aluminium. Do not place empty containers on the cooking zone, as they may cause damage.

Do not place hot recipients on the control panel, in the area of the pilot lights or on the edge of the cooking top, as they may cause damage.

Danger of mishaps

Pots from which liquids have completely evaporated can cause damage to the glass ceramic top, for which the manufacturer does not assume any responsibility.

The appliance is equipped with a cooling fan. If a drawer is set under the recessed hob, a suitable distance must be ensured between the contents of the drawer and the lower part of the unit, in order to avoid compromising ventilation.

The worktop should be flat and horizontal. The furniture should be cut to measure before installing the appliance. Remove any chips to avoid compromising the operation of electrical components.

Considering the ventilation of the cooktop, the following must be provided:

- a 20 mm space between the rear side of the furniture and kitchen's wall (fig.1-2).

- if the cooktop is installed above a drawer, leave a 65 mm space between the drawer and the top of the cooktop (fig.1).

Do not store small objects or sheets of paper in the drawer under the cooking hob, since such objects may be aspirated and could break the fan, thus hindering the unit's cooling; likewise, do not store metal or inflammable objects, which could become very hot or catch fire.

If the cooking hob is assembled behind a cabinet door, power it on only with the door left open. Close the cabinet door only if the appliance and residual heat indicator lights are off.

If the unit is assembled above an oven or an electric pyrolytic stovetop, it should not be operated while the pyrolytic process is ongoing, as it can trigger the cooktop's overheating protection.

The cooktop should not be installed above dishwashers because the steam released by the latter may lead to faulty operation of the electronic circuit of the cooktop.

Do not make use of any steam devices, as steam can reach the appliance's live parts and cause a short circuit.

WARNINGS

Any interventions or repairs on the unit during the warranty period must be carried out solely by the manufacturer's authorised service centre; conversely, the warranty will be invalidated and terminated immediately. The manufacturer will not recognise any warranties under any circumstances for any problems subsequently encountered.

Replace any defective or damaged parts with original spare parts: only original spare parts can ensure compliance with safety standards.

Notice to persons with pacemakers: keep in mind that an electromagnetic field is generated in the immediate vicinity of the unit while it is in operation.

The possibility that the pacemaker's operation may be affected is very remote. If in doubt, contact the pacemaker manufacturer or your doctor.

Noise emissions

Induction can generate slight noise emissions, which can vary depending on the material, type of pot and power setting selected.

When the cooktop is used frequently, the cooling fan turns itself on to protect the electronics, generating a buzzing sound: this is perfectly normal.

First usage

Use a damp cloth to clean and dry the cooktop before using it for the first time.

It is recommended to dry the appliance after having cleaned it with a damp cloth, in order to prevent the build-up of limescale.

When the unit is powered on for the first time, odours or fumes may be generated. The odour will diminish with each subsequent use, until it disappears altogether. Odours and any fumes are not caused by a faulty connection or damage to the appliance, and are not hazardous to health.
